

Hello sir, truthfully I'm still struggling again. This time it's a bit silly, but I'm confused by the wording: "A single PDF which shows process work for at least 5 ideas." I wasn't sure if there was a criteria in relation to the ideas. So honestly, I'm just going to wing it since I feel guilty asking so many questions!

1. Assuming we're doing the cursor interaction thing, I had the idea that I can make a cheap space invaders clone. Since I know nothing of coding and we're supposed to make something simple, my idea was to have the blaster fire activate in reaction to the cursor's location.
2. Probably a platformer kind of like that browser game you can play with the dinosaur whenever you don't have Wi-Fi. I hope you know what I'm talking about. Basically, just move your mouse up to jump.
3. A maze game. Same idea as the others basically mouse to move around the maze.
4. Pong? Honestly, I'm just picking the easiest things I can think of as someone who knows nothing about coding.
5. Now here me out, my grandiose plan... 2D fruit peeling simulator! Like with your cursor? I know, I know. Genius!

I hope you like my ideas and I REALLY hope this is what I was supposed to do. Also, please ignore the sketches I did on the pixel paper, I had committed to it way before I realized that the sketches were something entirely different from the second assignment.
